

Beverage Monitoring

Revolutionary system

to control your draft beer and free pour liquor

We offer a complete line of bar inventory management products to help beverage cost management products. Each solution is easy, fast, accurate, invisible to customers, and can be interfaced with your POS system.

You can measure every ounce of alcohol that flows through your premise, every minute, every day. Real time reports give you visibility of your actual inventory levels and stock movements. This powerful and timely reporting makes staff accountable, creating a deterrent to waste, spillage, over pouring, and theft. The result is increased bar profits from reduced draft beer and liquor waste and loss. Real time product movement tracking helps venue owners reduce inventory carrying costs, prevent out of stocks and track brand performance in real time.

We offer a complete range of beverage monitoring technologies

Wireless Pourers

- Compact rechargeable electronic devices mounted on spirit bottles
- Calibrate to pour nip - 30ml, or 1/2 nip - 15 ml from the bottle
- Simple button touch to switch pour sizes
- See battery status of every pourer in your bar. Outstanding battery life

Flow Meters

- Hardware devices installed on beverage lines
- Reduce beer loss from 25% (industry average) to 5%.

ETNs

- Pours drinks directly into the glass when inbuilt switch is activated
- L.E.D display with counter

Powerful variance reporting linked to your POS systems lets you identify where and when wastage and slippage occurs.

Seamless integration to existing point of sale system gives comprehensive variance reporting. Compare every ounce of alcohol that flows through your bar to your POS records. Assess pour costs and receive precise profit and loss information on a daily basis. Get accurate variance analysis to your PC or mobile.

With SMS or email messaging to the PDA, mobile phone or PC, automated alerts can be at store, regional, and corporate levels. Easy at a glance reports can show poured versus sold drinks plus brand performance. Reports can be drilled down to a 10 second period and easily exported to excel.

Benefits of Beverage Monitoring System:

- Instantly see where and when a variance occurs
- Easily track your pour costs, flow vs sales, trends and brand performance
- Track data minute by minute, by hour or day
- Easy integration to CCTV to link variances to actual images of customers & staff
- Reveal your real profitability levels
- Helps staff keep drink sizes constant
- Better record keeping of alcohol dispensing for risk reduction
