

Digital CCTV

If you are looking for a sensibly priced CCTV security system, **talk to us.**

Our entry level systems are commercial grade and come with remote internet access. Keep an eye on your business at home, on holiday or from another venue. Manage footage, camera positions, brightness and downloads remotely as well.

Our systems include:

CCTV Digital Video Recorders - continuous high quality digital CCTV recording and storage for days, weeks or months at a time.

High Resolution Cameras - high quality images, small and unobtrusive.

CCTV Monitors - range of high definition monitors in various sizes.

CCTV software - fully featured with complete remote operation.

We are experienced in the set up of large and small CCTV systems to provide you with sophisticated monitoring of your venue.

What is Digital CCTV?

A digital, multi channel surveillance system that uses advanced MPEG4 compression technologies. Images are evidence quality, time and date stamped. A large number of CCTV cameras can be connected to your CCTV software system. View on site or remotely via the internet. CCTV footage is recorded on a dedicated Digital Video Recorder located on or off site. Sensitive motion detectors ensure you only have footage of activity, not dead time.

Combine your Point of Sale with CCTV, and view from any internet connection.

Our POS integrated CCTV system is feature rich, with all the options you need to secure your business. You can link real time transaction data to live video of staff and customers. Overlay till receipts onto actual images to provide proof of who sold what, to whom, when and at what price. Electronically linked to your POS terminal, powerful searching lets you find voids, refunds and other transactions by time, staff name or other criteria. Variances are easily identified with full exception reporting.

For the safety and security of your venue and staff, surveillance cameras can be strategically located in critical areas of your business. View footage and data from any available internet connection. If an incident occurs, you have date and time stamped images suitable for insurance claims

Our CCTV systems can be integrated with a single pos terminal or several.

Who can benefit from POS integrated CCTV?

Any venue operator that needs to:

- search for voids, refunds and other detailed transactions based on time of day, staff member, or other criteria
- eliminate no-sale fraud and under-rings
- view how staff interact with customers
- benefit from viewing live, detailed sales transactions
- be in many places at the same time
- view their business from anywhere in the world
