

## Customer Paging System

# Avoid missed opportunities, Increase profits.

We have one of the widest selection of pagers on the market for venues of any size, and also multiple sites. Our pagers can be stand-alone, networked or system integrated into the company's phone or POS system. Most of our pagers are modular in design to let you trial a small number of pagers and add more later.

Notify waiting customers when their meal is ready anywhere onsite. Pagers can be set to vibrate, flash or beep when the customer is required to go back to the host stand.

### Ideal for:

- Bistros and cafés for waiting for a meal or drink order
- Hospitals and medical centres for alerting a patient when the doctor is ready to see them
- Restaurants to alert patrons when their table is ready
- Noisy environments where overhead paging may be inefficient.

### Features

- Silent vibration/ tone/ flash & custom voice option
- Standard out of range and search facility
- Secure transmission
- Instant contact
- Robust and Durable
- Supports up to 999 pagers
- Superior 2 watt transmitter for high quality in-building coverage
- Extended transmission range options available
- Full training and support
- Range up to 1km or more

Our pagers can be stand-alone, networked or system integrated into the company's phone or POS system. Modular in design, you can trial a small number of pagers and add more as required.
